

**POWER LINK**

# About us

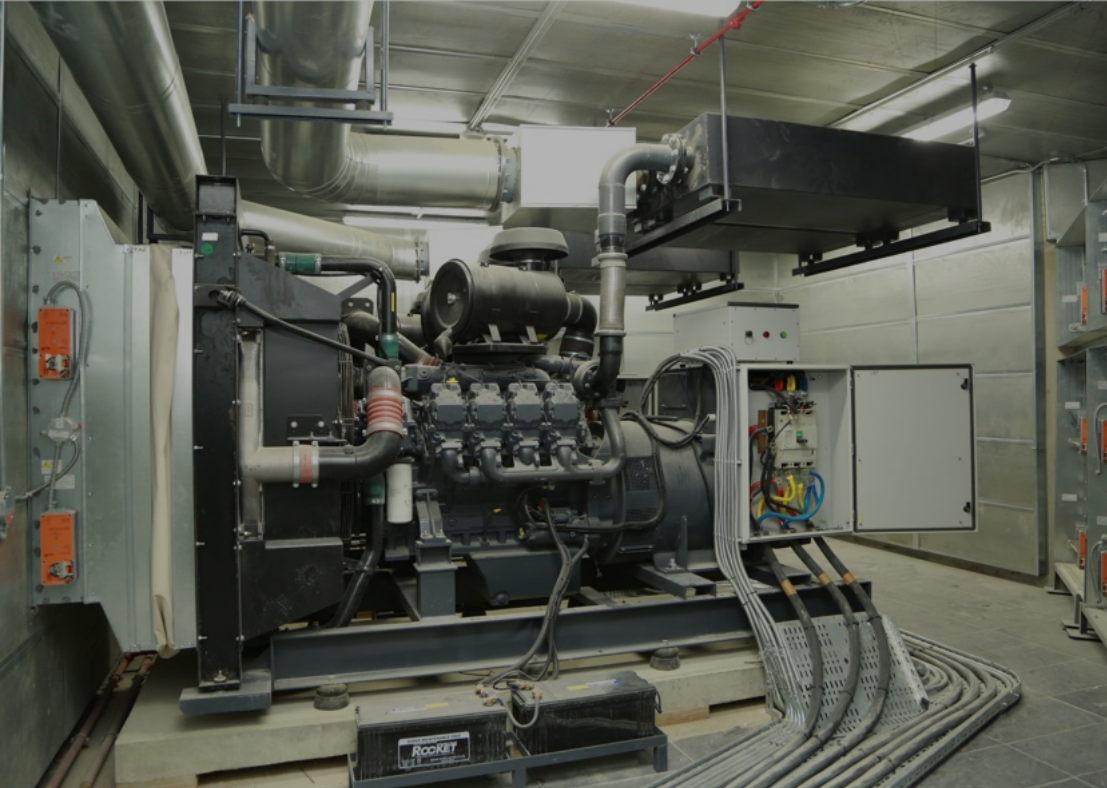

Power Link has been supporting industrial and power-generating products for more than three decades. We specialize in generating sets; installing and maintaining Generator Power Plants.

Our experience and success have allowed us to grow and expand our core of capabilities to provide cost-effective, custom-manufactured, and high-performance acoustical products and solutions to noise problems of all kinds.

In 2009, Power Link expanded its department by bringing the best personnel and offering the best engineering solutions by collaborating with suppliers from every continent, mainly Europe and the US.

Today, Power Link proudly contributes in creating value at which it achieved global partnership, in particular with European Manufacturers, supplying factory assembled generating sets from Spain, Italy, and more. Our brands comprise mainly Deutz , Volvo Penta, Cummins, and Baudouin engines coupled with Stamford, Meccalte, Leroy Somer and others.

Furthermore, Power Link recently joined the Partnership with Spanish Oil Manufacturer Matrax Lubricants as an exclusive distributor of oil, coolants, and additives in Lebanon.

# What we do

We provide our customers with Diesel Power Generating Sets from a wide range of brands, including Deutz, Cummins, Volvo, Perkins, and many others. Our goal is to supply our clients with primary or backup power sources to meet their energy needs.

Our mechanical engineers offer integrated capabilities, including architectural studies for the optimal placement of machines, 2D and 3D drawings, noise calculations, ventilation considerations, thermal treatment, and vibration analysis. Our electrical engineers can design all types of control panels according to our customers' needs.

Beyond installing residential and industrial power plants, we offer extensive maintenance contracts to our clients. We aim to provide a seamless experience, from the construction phase through day-to-day operations.

As of today, we have over 100 active technical agreements for more than 200 generators across Lebanon.
